1 Introduction

This manual provides guidance for administrators using the Jadeer Admin. It covers the steps required to access the system, manage company verification statuses, and configure application settings.

The Jadeer Admin is a dedicated interface that allows authorized administrators to review registered companies and manage their verification status. Administrators can approve, reject, or place companies under review based on the submitted information and required documentation.

2 Welcome Page

Upon opening the Jadeer Admin, administrators are presented with the Welcome page. The page displays a Log In button to proceed to the login screen.

Figure 1: Jadeer Welcome page.

3 System Access

3.1 Logging In

Administrators can access the Jadeer Admin by entering their registered email address and password on the Login page. Unlike company accounts, admin accounts do not require registration and are pre-configured by the system. After entering valid credentials, the administrator is directed to the OTP verification step.

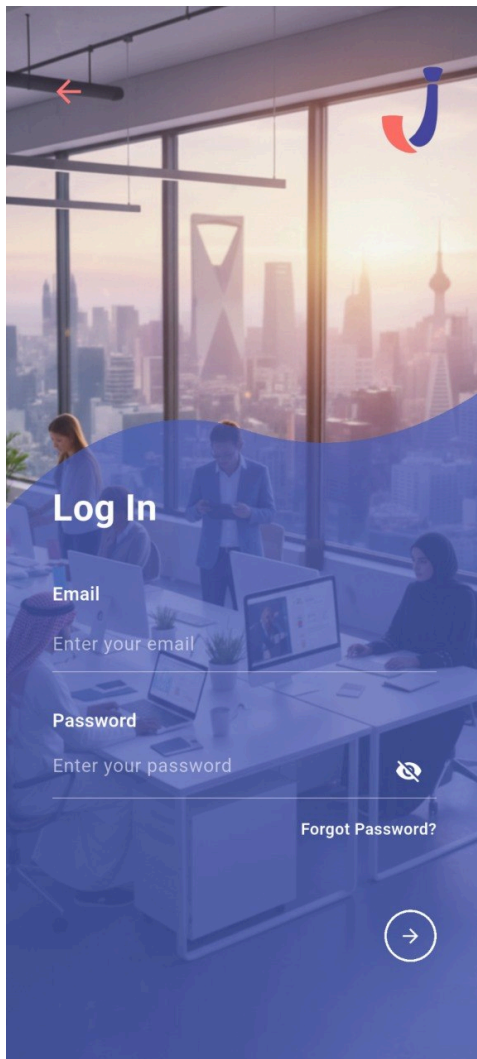

Figure 2: Login page in its default empty state.

Figure 3: Login page with credentials entered.

3.2 OTP Verification

After entering valid login credentials, a 6-digit verification code is sent to the administrator's registered email address. The administrator must enter the code within 2 minutes to complete the login process. If the code expires, it can be requested again using the Resend Code button.

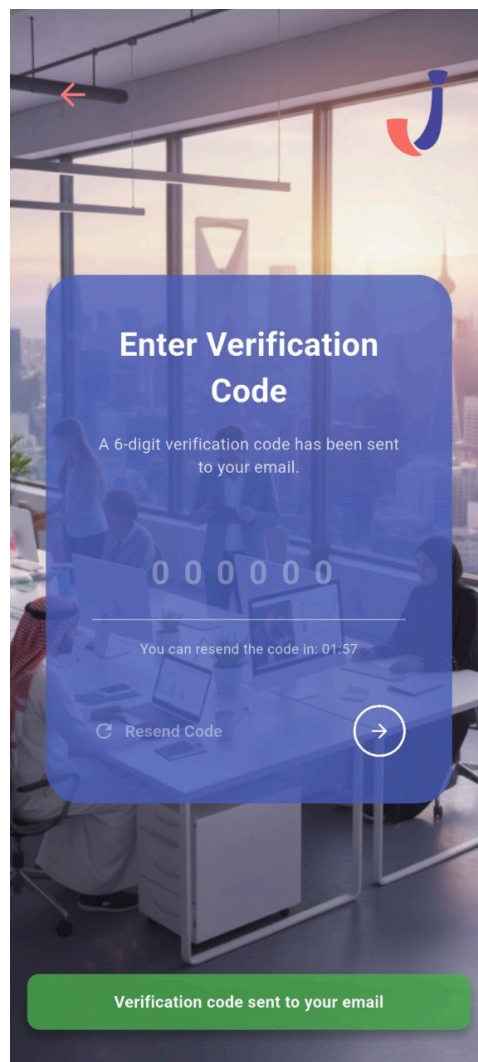

Figure 4: OTP verification page.

3.2.1 Receiving the OTP Verification Email

The verification code is delivered to the administrator's registered email address from Jadeer Admin. The email displays the 6-digit code and indicates that it is valid for 2 minutes only. The administrator should not share this code with anyone.

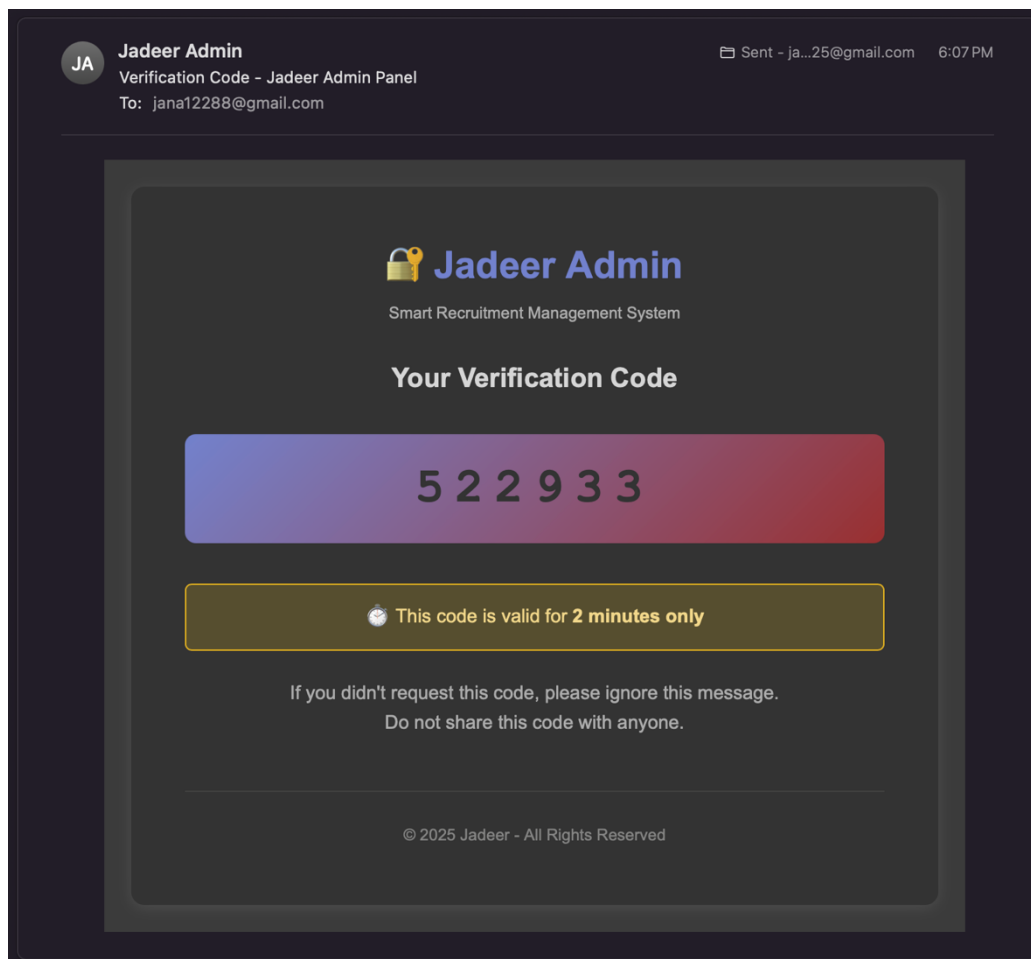

Figure 5: OTP verification email.

3.3 Forgot Password

Administrators who have forgotten their password can tap Forgot Password? on the Login page to request a password reset. The system requires the administrator to enter their registered email address. If the email address is not found, an error message is displayed.

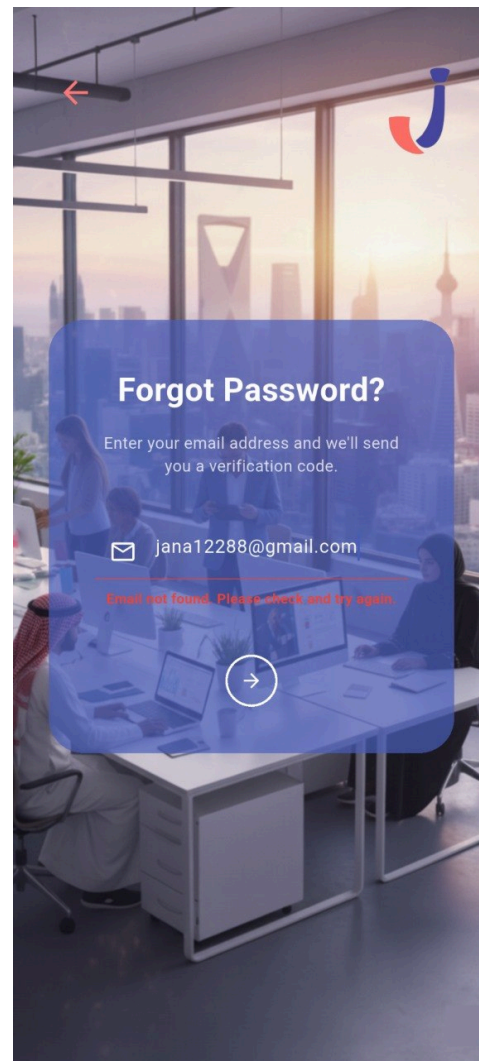

Figure 7: Forgot Password page with email not found error message.

4 Admin Dashboard

4.1 Dashboard Overview

After successfully completing the login and OTP verification process, the administrator is directed to the Admin Dashboard. The dashboard displays a list of all registered companies along with their email address, registration date, and current verification status. A session timer is displayed at the top of the page, indicating the remaining active session time.

Each company card displays the following information:

- Company name and current status.
- Registered email address.
- Registration date.
- Change Status button.

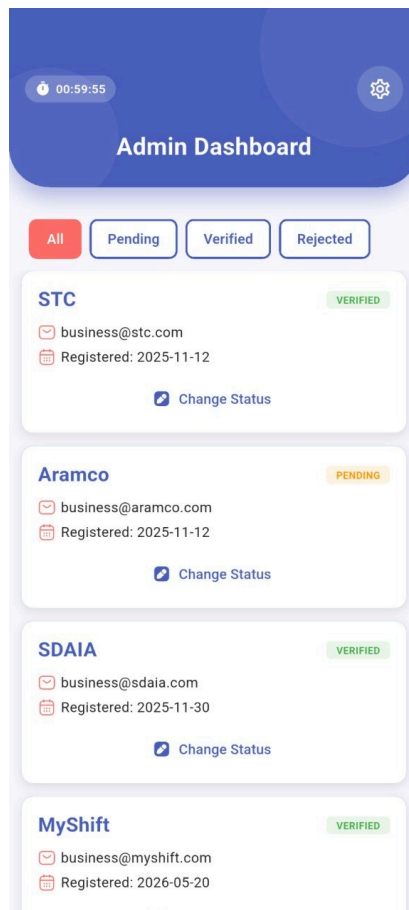

Figure 8: Admin Dashboard.

4.2 Filtering Companies by Status

The Admin Dashboard includes a filter bar at the top of the company list, allowing administrators to view companies by their verification status. The available filter options are:

- All – displays all registered companies.
- Pending – displays companies awaiting verification.
- Verified – displays companies that have been approved.
- Rejected – displays companies that have been rejected.

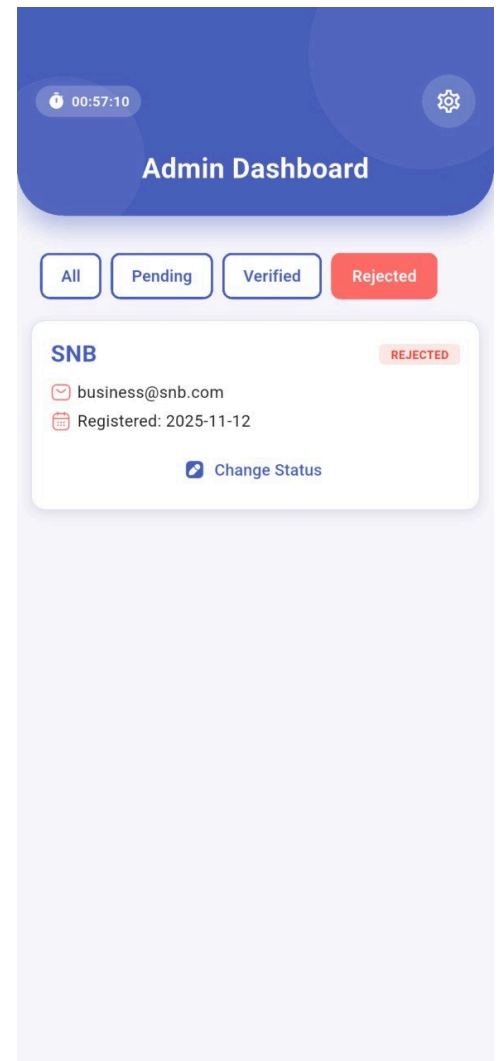

Figure 11: Admin Dashboard filtered by Rejected status.

5 Company Verification Management

Administrators are responsible for reviewing registered companies and managing their verification status. Once a company registers on Jadeer, the administrator can review their information and update their status accordingly.

5.1 Changing Company Status

Administrators can change a company's verification status by tapping the Change Status button on the Admin Dashboard. A dropdown menu appears with the following options:

- Set as Verified
- Set as Pending
- Set as Rejected

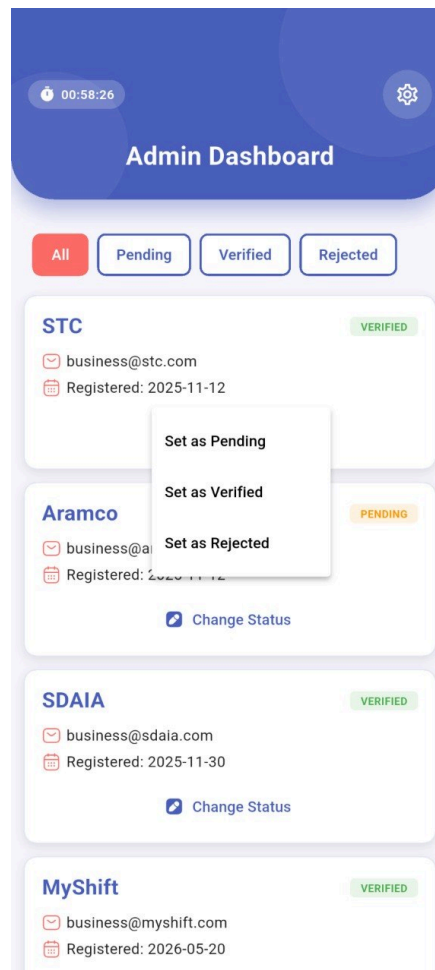

Figure 12: Change Status dropdown menu.

5.1.1 Set as Verified

Selecting Set as Verified approves the company's registration, granting them full access to the Jadeer platform. The company's status badge is updated to Verified and a confirmation message is displayed on the dashboard.

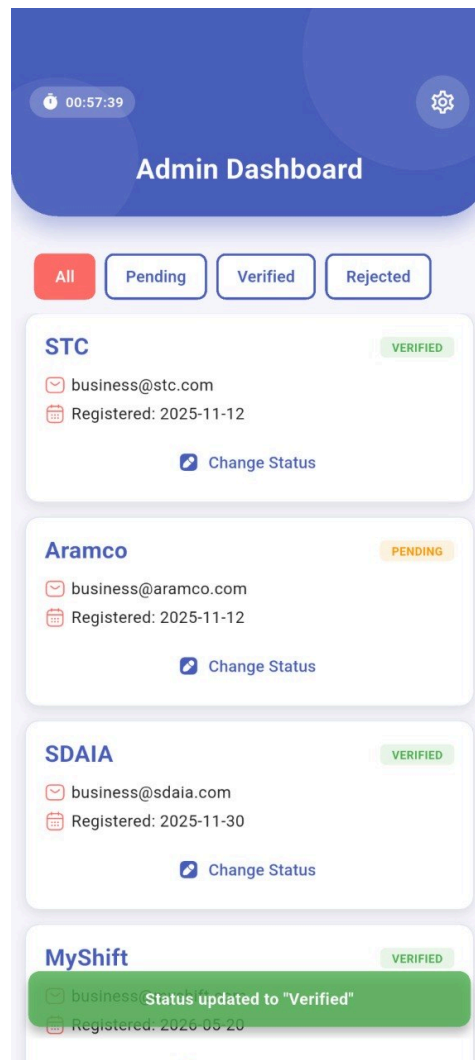

Figure 13: Status changed to Verified confirmation.

5.1.2 Set as Pending

Selecting Set as Pending places the company back under review. This option can be used when additional information is required or when a previously verified or rejected company needs to be reassessed.

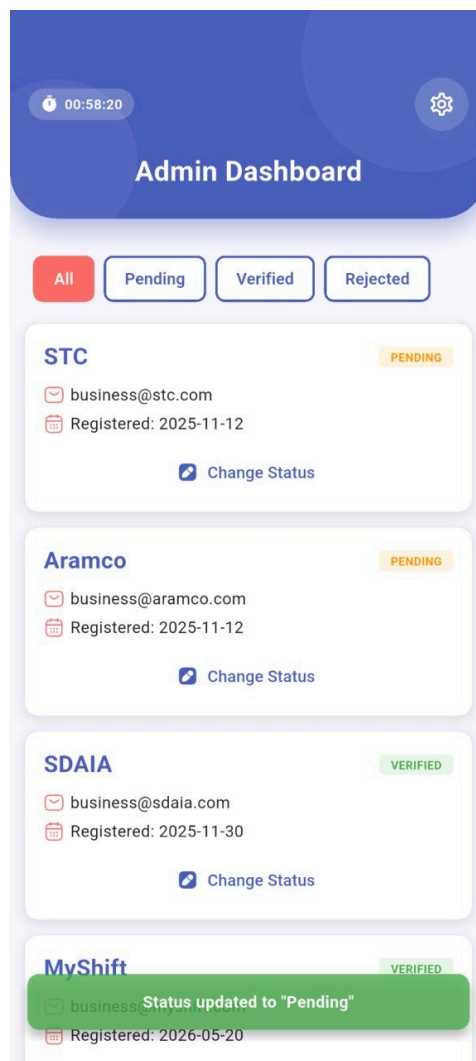

Figure 14: Status changed to Pending confirmation.

5.1.3 Set as Rejected

Selecting Set as Rejected rejects the company's registration. The company's status badge is updated to Rejected and a confirmation message is displayed on the dashboard.

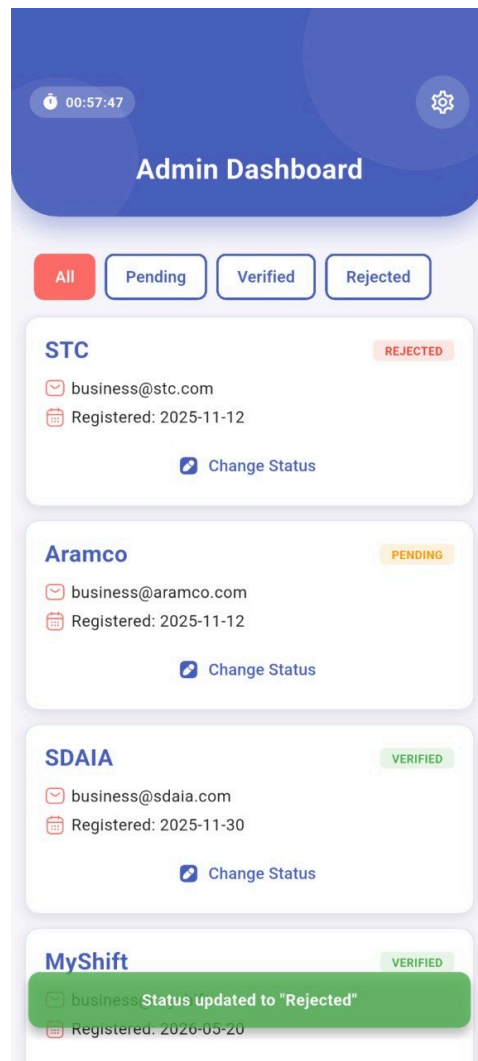

Figure 15: Status changed to Rejected confirmation.

6 Settings and Account Management

6.1 Accessing Settings

Administrators can access the Settings page by tapping the settings icon located at the top right corner of the Admin Dashboard. The Settings page provides options to manage the application appearance, view app information, and log out.

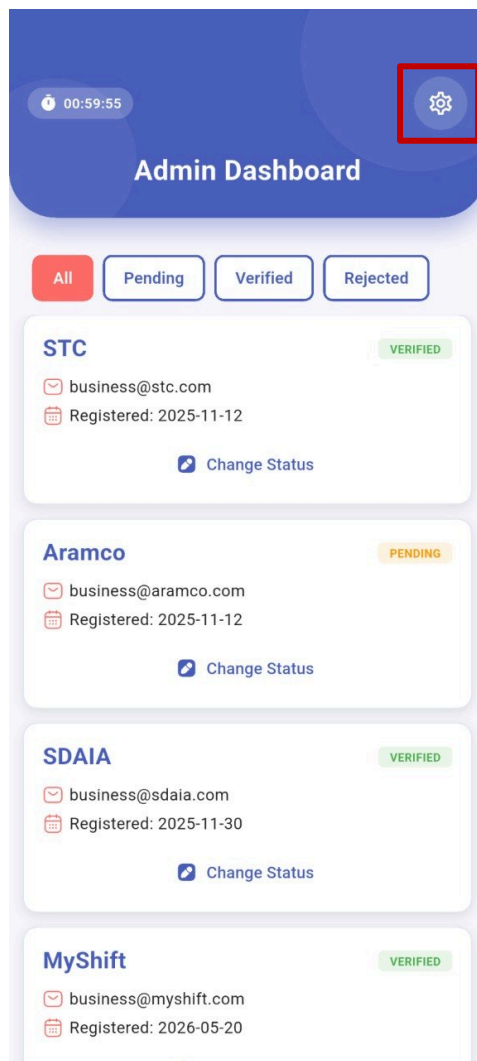

Figure 17: Settings icon.

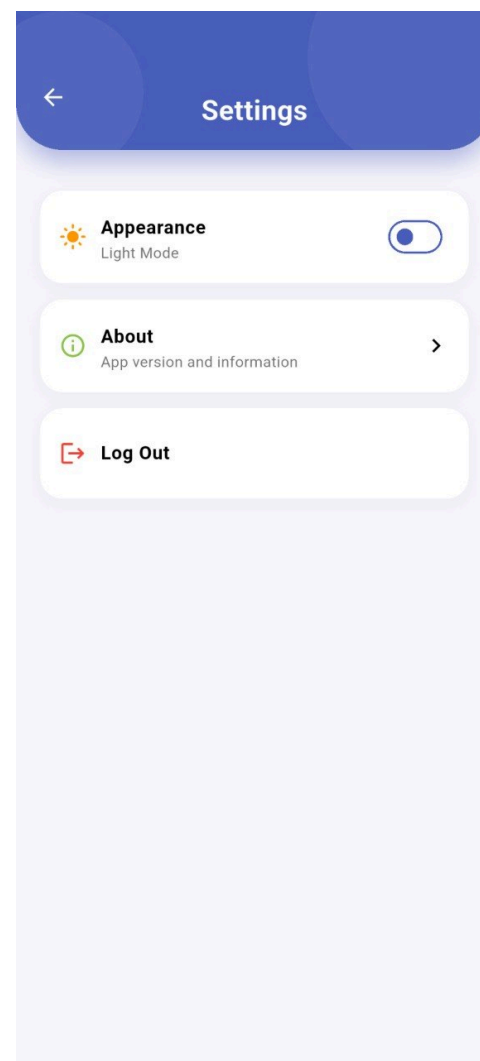

Figure 16: Settings Page.

6.2 Appearance Settings

The Settings page includes an Appearance toggle that allows administrators to switch between Light Mode and Dark Mode. The selected mode is applied immediately across the entire application.

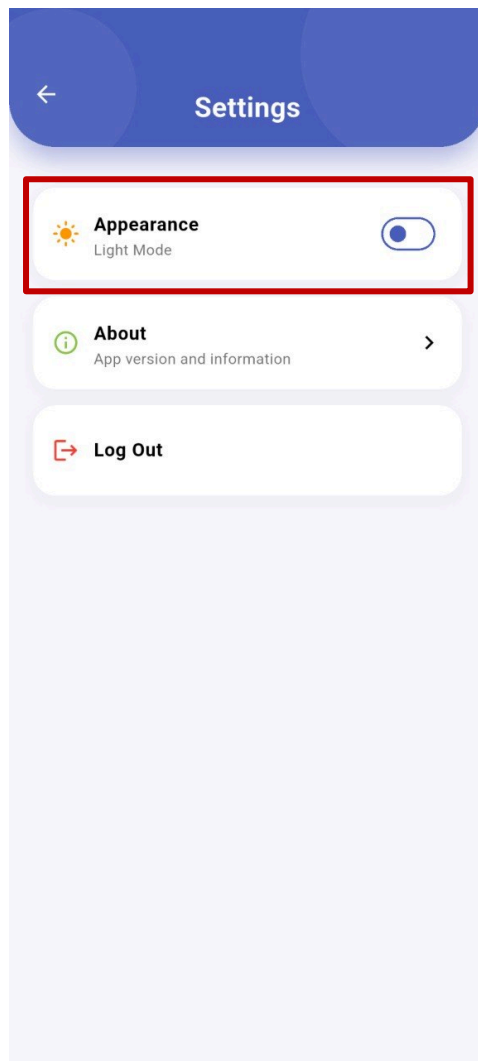

Figure 19: Light Mode Appearance Setting.

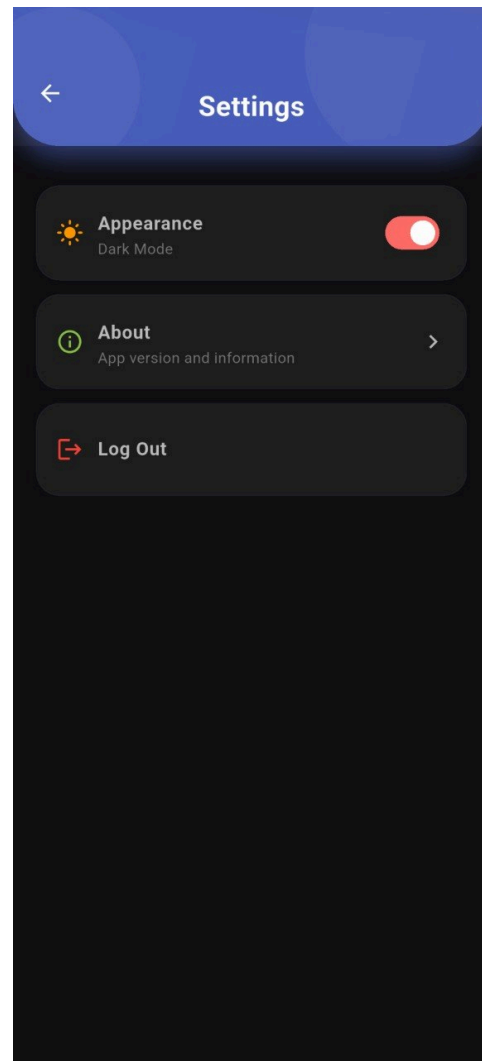

Figure 18: Dark Mode Appearance Setting.

6.3 About Page

Administrators can view application information by tapping About on the Settings page. The About page displays the application name, version, a brief description, development team details, and contact information.

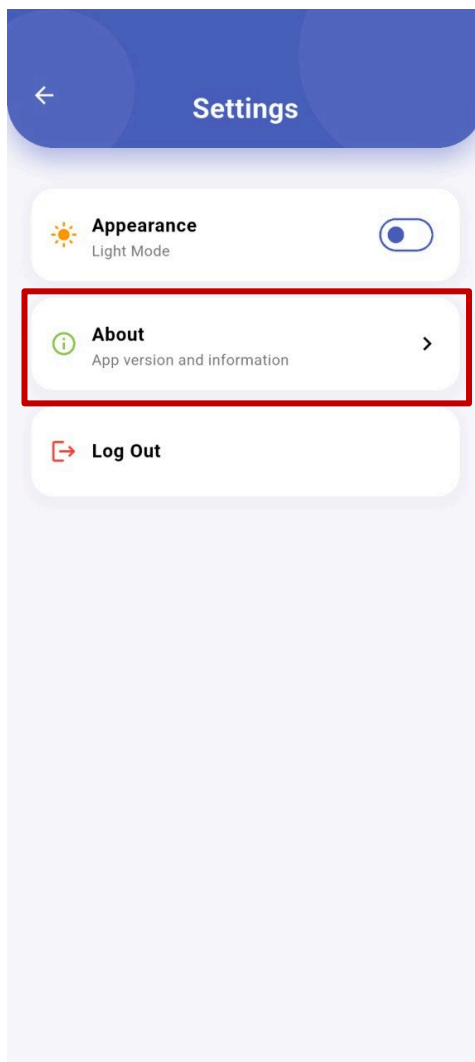

Figure 20: About Option.

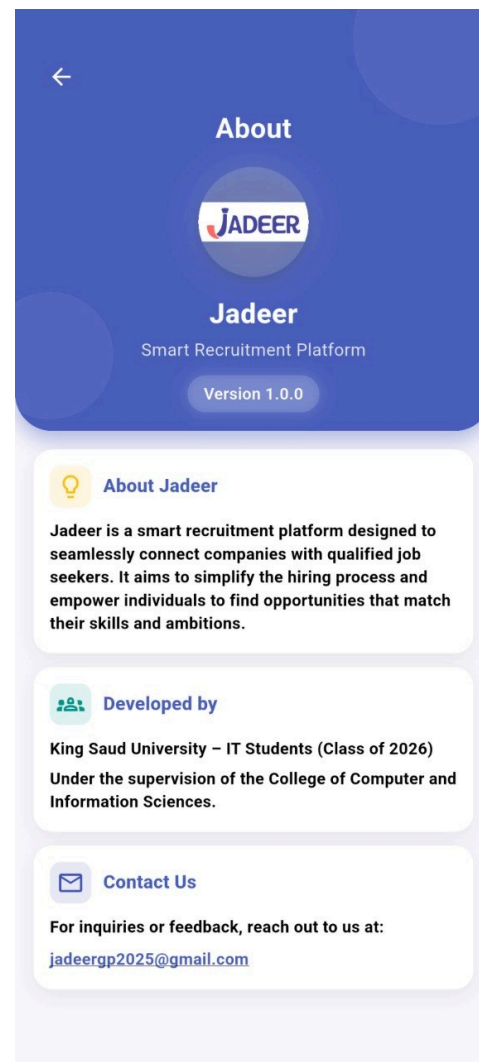

Figure 21: About Page.

6.4 Logging Out

Administrators can log out by tapping Log Out on the Settings page. A confirmation popup appears asking the administrator to confirm the action. Tapping Log Out in the popup ends the session and returns the administrator to the Login page.

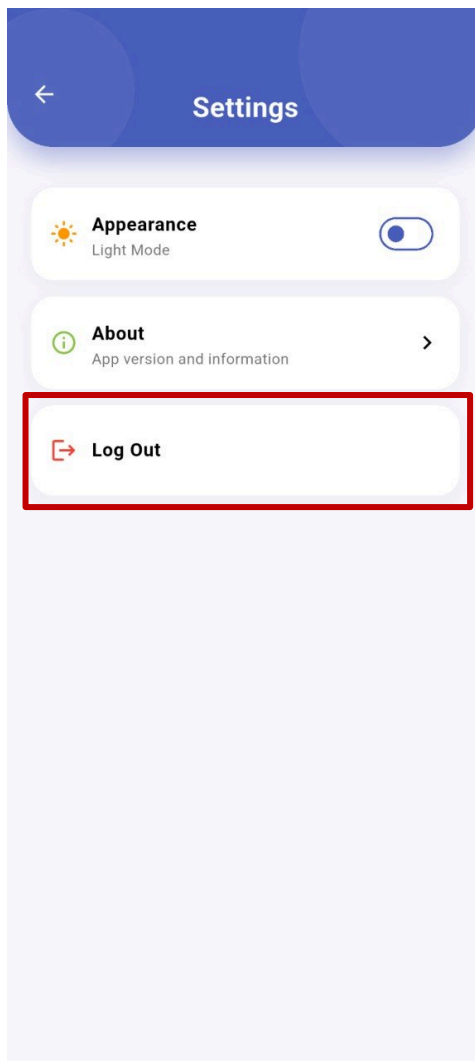

Figure 23: Log out Option.

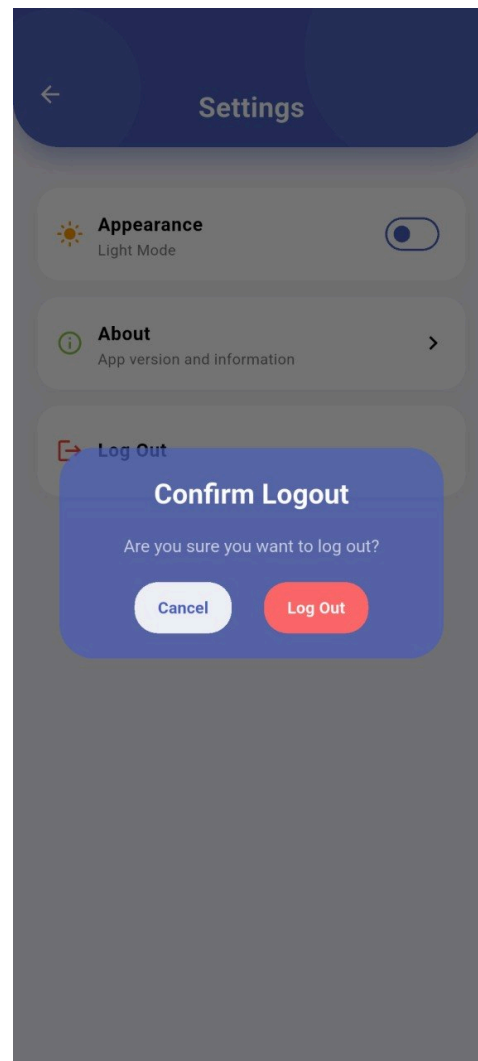

Figure 22: Logout confirmation popup.

7 Session Management

7.1 Session Timer

The Admin Dashboard displays a session timer at the top left corner of the screen, indicating the remaining time for the current active session. Each session is valid for 1 hour. The timer counts down from 60 minutes and is visible throughout the administrator's session.

If the administrator remains active, the session timer is automatically reset, allowing the session to continue without interruption.

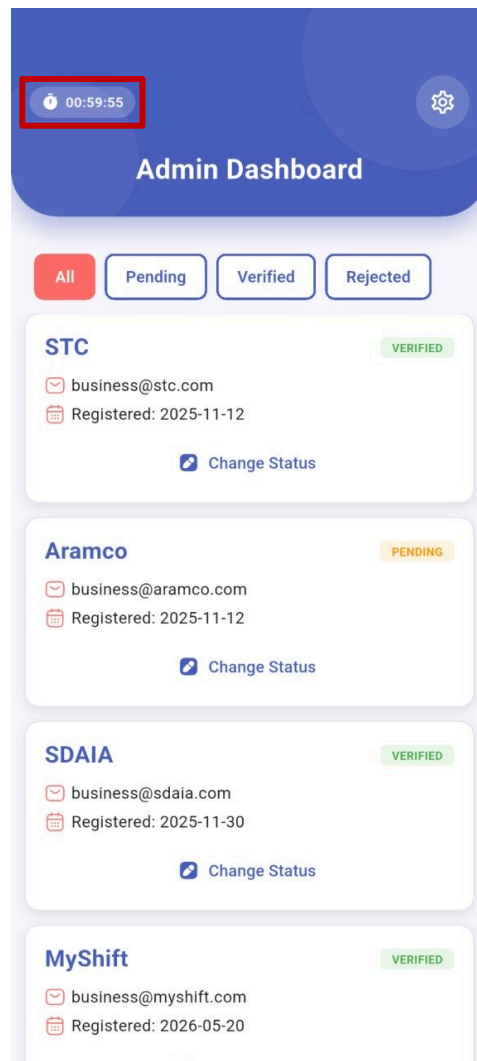

Figure 24: Admin Dashboard showing the session timer.

7.2 Automatic Logout

If the administrator is inactive for 15 minutes while the session timer is still running, the system will automatically log the administrator out once the timer reaches zero. A Session Expired popup is displayed informing the administrator that they have been automatically logged out after 1 hour. The administrator must log in again to access the system.
